Outer-boundary diagnosis — no stable 3D evolution claimed
A Initial physical solve: boundary still fails
Actual metric-connection rate
Bulk RMS
Scri maximum
Original pair
Affine correction
Correction + outer layer
B Saved 3D failure: diagnostic decomposition
Scri maximum |connection rate|
No contribution removed from a physical solve
181.6
183.2
18.2
Full failure
Highest radial mode contribution
Remaining contribution
C Scalar design control (not a 3D pass)
Endpoint divergence maximum
The prescribed highest-mode source is unchanged
Unit penalty
10× penalty
100× penalty
Extra shift degree
D Enriched full-tensor physical solve
All-node original residual RMS
Boundary block
Expanded coarse space
Coupled radial lines
RMS target
Krylov iterations
