Initial gauge at t=0, block N=10 — boundary failure persists; no evolution claim
A Reference accuracy is not solve accuracy
Maximum scri metric-connection rate
Sampled 1D field, before solving
Actual 3D solved field
Unchanged scri target
Global correction
3 blended layers
Layer correction
3 blended layers
Layer correction
4 concentric layers
B Radial agreement improves with layout
Radial shift RMS error vs frozen 1D
All cells
r < 0.15
Global correction
3 blended layers
Layer correction
3 blended layers
Layer correction
4 concentric layers
C Every active core and shell node retained
Volume-weighted radial-bin shift error
Global, blended
Layer, blended
Layer, concentric
Initial slice transition
Concentric boundary-only bin is at roundoff (below axis)
Compactified radius r
D Solver control on the same physical equations
Original bulk/Dirichlet residual RMS
Blended GMRES
Blended PCG
Concentric GMRES (capped)
Concentric PCG
Blended trace-weight PCG
Bulk RMS target
Krylov iterations
