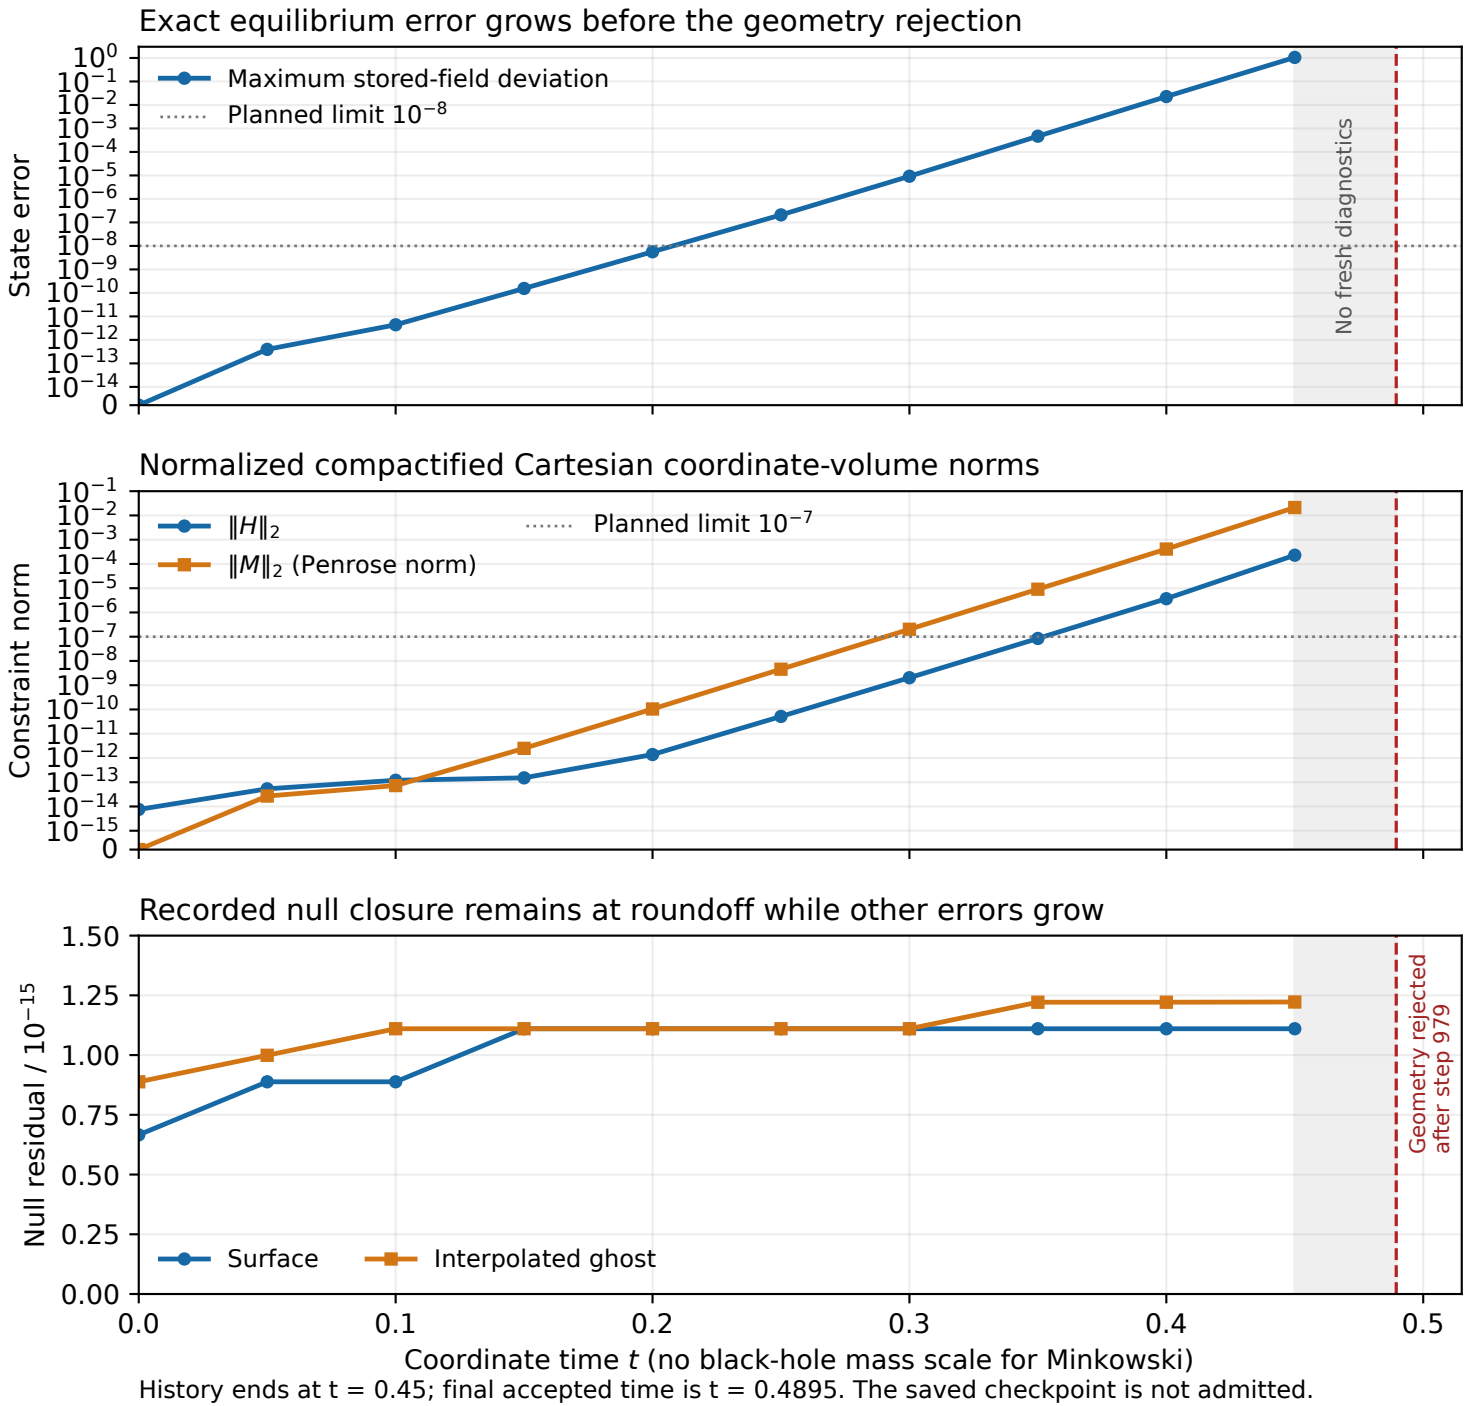
Minkowski duration test: growing error and rejected geometry

Aurora | $n = 16$, $\Delta t = 0.0005$ | 12 MPI ranks / 12 GPU tiles



History ends at t = 0.45; final accepted time is t = 0.4895. The saved checkpoint is not admitted.

Zero values are retained on the first two symmetric-log axes. These records do not isolate the growing mode.
