Constraint norms: N16 and N24 through 3M
Same log-chi/log-lapse scheme through 3M; dt/dx = 0.04444; core spacing ratio = 1.5
Hamiltonian: full domain
Radial momentum: full domain
Hamiltonian: outside accepted horizon
Radial momentum: outside accepted horizon
N16
N24
$\|H\|_2$
$\|M_r\|_2$
$\|H\|_{2,\mathrm{ext}}$
$\|M_r\|_{2,\mathrm{ext}}$
t/M
Normalized compactified-coordinate volume norms. Exterior cuts use each run's own horizon.
Gaps indicate an unaccepted horizon. Two resolutions alone do not establish a convergence order.
