N16: inner-gauge/damping change; same grid, timestep, floors and outer closure
Previous smooth gauge, direct from t=0
Inner telegrapher, direct from t=0
Exterior Hamiltonian RMS
Exterior radial-momentum RMS
Accepted horizon areal radius / M
Running maximum scri null residual
1e−15
t / M
Measured samples only; no gap interpolation. Exterior norms use each run’s complete horizon candidate.
Horizon acceptance flags remain in the source histories. This comparison does not establish convergence.
