Original-binary Minkowski resolution controls
12 MPI ranks / 12 GPU tiles • diagnostics only; no endpoint extrapolation
n16, dt=0.0005
n24, dt=1/3000
n32, dt=0.00025
n16, dt=0.00025
Stored-field deviation (maximum)
Reported Hamiltonian RMS
Momentum RMS (Penrose norm)
Z₄ RMS (Penrose norm)
Null closure: recorded running maxima
Solid/dashed: surface; dotted: ghost
Relative residual / 10⁻¹⁵
Full-step node throughput after startup
Million active cell-steps / wall second
Coordinate time t
Outcomes and rejection times are separate from diagnostic curves; see summary.md.
Open circles: state-fit samples in the shaded amplitude window. Zero/nonfinite log values are not floored.
