Fresh direct-variable smoother-gauge runs: N16 completes 20M; N24 fails at 3.726M
Hamiltonian — full history
Radial momentum — full history
Hamiltonian — early evolution
Radial momentum — early evolution
3D N16: direct from t=0
3D N24: direct from t=0
Preserved 1D N513
Exterior volume RMS
t / M
N24 diagnostics end at 3.6M; dashed line marks its last accepted time. No missing-value interpolation.
3D exterior cuts use complete horizon candidates; finder flags are preserved. 1D is much finer and uses different numerics.
These data do not demonstrate convergence; each run uses its own horizon cutoff.
