Protocol comparisons: changing variables from the start changes the trajectory
N16: Hamiltonian
N24: Hamiltonian
N16: Radial momentum
N24: Radial momentum
Smooth blend; direct from t=0
Smooth blend; log variables
Original blend; log → direct at 3M
Exterior volume RMS
t / M
Retained samples only; gaps are not filled. Earlier runs differ in variable chart, floors and/or gauge blend.
Smooth-log N24 shown only for its completed matched 3M trial; original long-run horizons retain their quality gaps.
