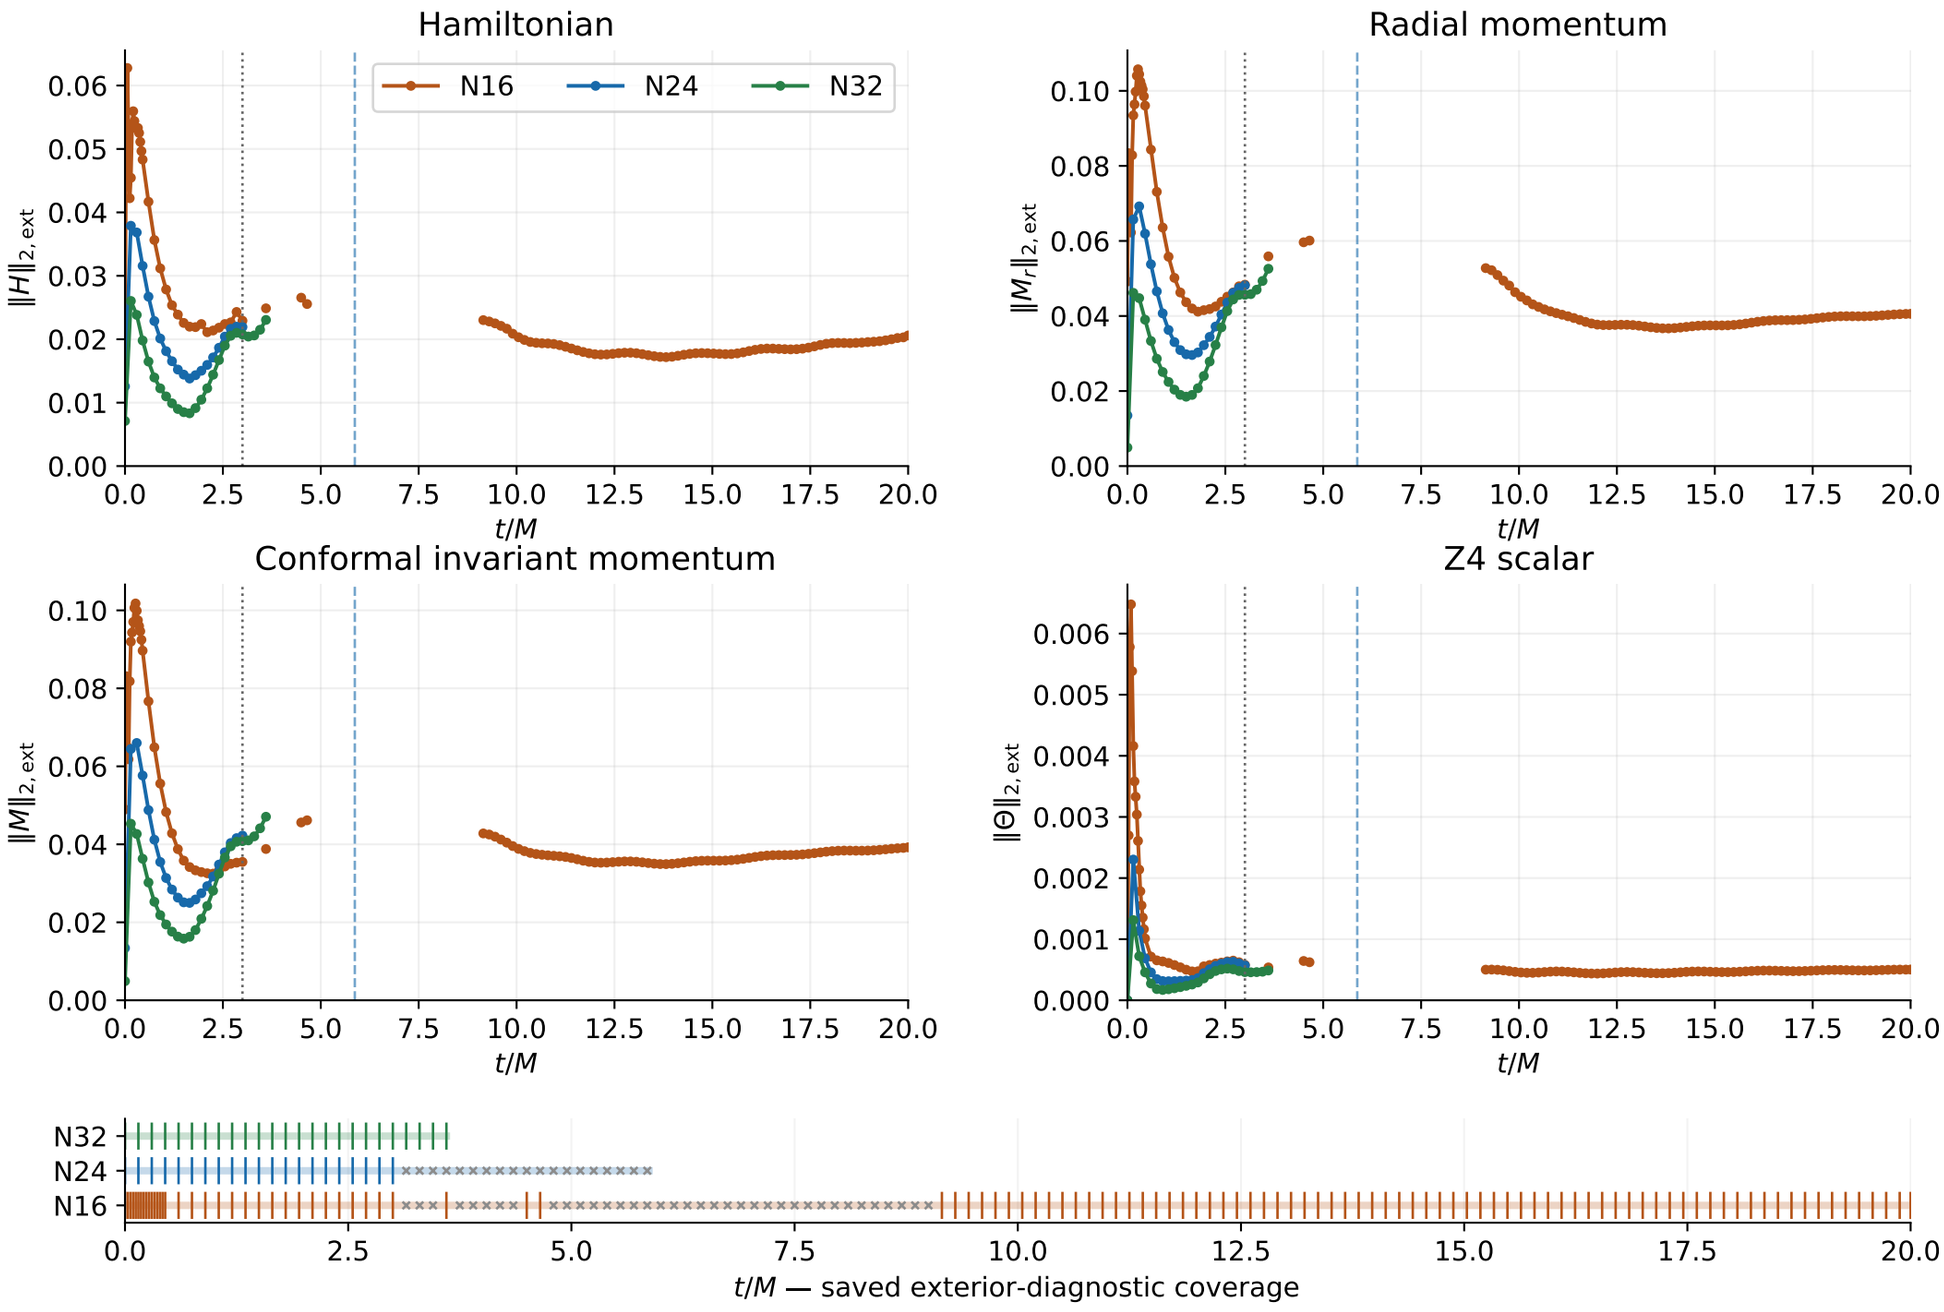
Exterior constraint histories: all retained N16 / N24 / N32 measurements

N16 completed 20M; N24 failed after 5.869M; N32 continuation is running (snapshot).



Dotted line: log → direct variables at 3M. Dashed blue line: N24 failure. Gaps / gray ×: exterior norm not recorded.
N16/N24 through 3M use complete candidate cutoffs; otherwise only accepted horizons. No missing-value interpolation.
Normalized compactified-coordinate volume RMS; each run uses its own horizon radius.
