Exterior constraint norms through 3M: N16 versus N24
Complete horizon candidates used as integration cutoffs, including above-tolerance candidates
Hamiltonian
Radial momentum
Conformal invariant momentum
Z4 scalar Θ
N16
N24
$\|H\|_{2,\mathrm{ext}}$
$\|M_r\|_{2,\mathrm{ext}}$
$\|M\|_{2,\mathrm{ext}}$
$\|\Theta\|_{2,\mathrm{ext}}$
t/M
Every marker is a measured diagnostic; no missing-value interpolation.
Each run uses its own candidate radius and normalized compactified-coordinate volume.
