Direct telegrapher-to-outer transition: fresh evolution to 10M
DO1 N16
Previous IT1 N16
Exterior Hamiltonian RMS
Exterior radial-momentum RMS
Accepted horizon areal radius / M
Running maximum scri null residual
1e−15
t / M
Measured samples; missing diagnostics remain gaps. Exterior cutoffs use each run's complete horizon candidate.
Last diagnostic can precede last accepted step. Completion alone does not establish convergence.
